

About two years after the first wave of small Digital Photo Frames for the keyring, now the second generations surfaces. More features, low weight, better display and of course: cheaper. Our model "C-Multi" is on of the best developments of this items.

The "C-Multi" has a fresh design, supports MP3-files, and supports SD memory cards. This breaks the limit of the 8MB/32MB barrier, which blocked bigger file quantities until today.

The 1.5" display has a resolution of 128x128x Pixel. A clock and backgroundmusic for slideshows is also integrated.

So, while you are at work, in the bar, school, college, at home or at party - this is exactly the item you need, to show your boy-/girlfriend, pet, car, boat or latest holiday pictures around. And if like, you can also play your favorite songs and share the sound with the other people. Ain` t that great?

The power supply comes from one embedded 3.7V Accu (for about 4 hours permanent view), which is reloaded by the USB-Port. Supported picture format is JPG.

The display has backlight, which proofs good picture even in bright daylight.

For promotional, event and premium use, it can be imprinted, supplied with memory cards, preinstalled sounds and pictures, custom giftbox and depending on the quality, also the case can be made in Pantone color.

Features:
